This video tool can help you add or replace background audio and music in a video file, you can replace the audio in the video, or just add new audio to the video while retaining the old. The resulting video has the same duration as the original video, and if the new audio is shorter than the source video, audio will automatically loop. You can set the volume and start position of the newly added audio. The output format is MP4 format.

Options:

- Replace Audio in Video, old audio in video will be removed.
- Keep Audio in Video, add new audio to the video as background music.

How To Use:

1. Select a video file (such as *.mp4, *.mkv, *.avi, *.wmv, *.flv, *.mov, *.vob, *.3gp, *.rmvb, *.mts, *.m2ts, *.rm, *.divx, *.asf, *.webm and more).
2. Select a audio file (such as *.mp3, *.wav, *.midi or *.wma).
3. Click button "Add" to start upload your files.
4. Once upload completed, converter will redirect a web page to show the mixed result.

Volume and Position:

- Volume, if you need to increase or decrease the volume of new audio, you can select a volume value to increase or decrease the volume by a percentage.
- Position, by default, the added audio will start at the same time as the original video, if you want to delay it, you can set the position value, for example, a position at 10th second means that new audio will start at 10th second.

Remark:
